## **Social responsibility and sustainable development — Guidance on using ISO 26000:2010 in the food chain**

---

## National foreword

This Published Document is the UK implementation of ISO/TS 26030:2019.

The UK participation in its preparation was entrusted to Technical Committee AW/34, Food Technical Committee Chairmen.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 34, *Food products*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

**Social responsibility is a holistic approach to contribute to sustainable development.**

Social responsibility is “the responsibility of an organization for the impacts of its decisions and activities on society and the environment, through transparent and ethical behaviour”. It can be also understood as a tool for innovation and competitiveness now and for future generations.

Organizations in the food chain around the world, and their stakeholders, are becoming increasingly aware of the need for and benefits of socially responsible behaviour in the whole value chain of their operations. Organizations in the food chain willing to implement social responsibility can benefit from using this document in conjunction with ISO 26000:2010.

This document provides guidance on the application of ISO 26000:2010 specifically for organizations in the food chain and is intended to be useful to all types of organizations in the food chain, whether large or small, and whether operating in developed or developing countries. Food chain organizations may use this document in association with other relevant organisations and stakeholders.

Implementation of social responsibility, besides being a source of innovation and attractiveness for the organization, brings many benefits: improved dialogue with stakeholders, improved social cohesion, differentiation from the competition, better reputation, improved economic and industrial performance, a better view of investors, donors, sponsors, etc. and, in the end, productivity gains.

Social responsibility is a powerful tool that helps organizations move from good intentions to good practices linked to the United Nations sustainability framework. This document is intended to support organizations in the food chain that are committed to contribute to the achievement of the 17 Sustainable Development Goals (SDGs) of the United Nations 2030 Agenda for Sustainable Development. SDG 2 specifically promotes sustainable agriculture, while SDG 12 focuses on sustainable consumption and production patterns (see [Annex A](#) and [Annex C](#)).

### **Definition and summary of the principles of social responsibility according to ISO 26000:2010**

ISO 26000:2010 defines social responsibility as:

“the responsibility of an organization for the impacts of its decisions and activities on society and the environment, through transparent and ethical behaviour that:

- contributes to sustainable development, including health and the welfare of society;
- takes into account the expectations of stakeholders;
- is in compliance with applicable law and consistent with international norms of behaviour; and
- is integrated throughout the organization and practised in its relationships”.

ISO 26000:2010 describes the two fundamental practices of social responsibility, which are:

- the recognition by an organization of its social responsibility; and
- the identification of, and engagement with, stakeholders.

As with the principles described in ISO 26000:2010, Clause 4, these practices should be kept in mind when addressing the core subjects of social responsibility described in ISO 26000:2010, Clause 6.

Organizations should base their behaviour on standards, guidelines or rules of conduct that are in accordance with principles of right or good conduct in the context of specific situations, even when these

situations are challenging. The seven principles of social responsibility addressed by ISO 26000:2010 are as follows.

- **Accountability:** an organization should be accountable for its impacts on society, the economy and the environment.
- **Transparency:** openness about decisions and activities that affect society, the economy and the environment, and willingness to communicate these in a clear, accurate, timely, honest and complete manner.
- **Ethical behaviour:** an organization should behave ethically, basing its behaviour on the values of honesty, equity and integrity and showing concern for people, animals and the environment and a commitment to address the impact of its activities and decisions on stakeholders' interests.
- **Respect for stakeholder interests:** an organization should respect and consider and respond to the specific interests of other individuals or groups that comprise the organization's stakeholders.
- **Respect for the rule of law:** to comply with all applicable laws and regulations, an organization should take steps to be aware of applicable laws and regulations, to inform those within the organization of their obligation to observe and to implement those measures.
- **Respect for international norms of behaviour:** an organization should respect international norms of behaviour, while adhering to the principle of respect for the rule of law and not become complicit in any negligence, especially in situations or countries where the law or its implementation does not provide for adequate environmental or social safeguards.
- **Respect for human rights:** an organization should respect human rights and recognize both their importance and their universality, promote them, take steps to respect them and avoid passively accepting or actively participating in the infringement of rights.

# Social responsibility and sustainable development — Guidance on using ISO 26000:2010 in the food chain

## 1 Scope

This document provides guidance on using ISO 26000:2010 in the food chain by focusing on the major aspects from its seven core subjects, namely organizational governance, human rights, labour practices, environment, fair operating practices, consumer issues and community involvement and development

The main objective is to help organizations in the food chain, regardless of their size or location, to draw up a list of recommendations and move towards a more socially responsible behaviour.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 26000:2010, *Guidance on social responsibility*

## 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 26000:2010 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

### 3.1

#### organization

entity or group of people and facilities with an arrangement of responsibilities, authorities and relationships and identifiable objectives

Note 1 to entry: For the purposes of this document, the term refers to a single business operator or a group of business operators in whole or in part of the food supply chain: farms, coops, production organizations, processors, transport, handling, services, retails... An organization can be public or private and includes, but is not limited to, sole-trader, company, corporation, firm, enterprise, authority, partnership, association, charity or institution, or part of combination thereof, whether incorporated or not, public or private.

[SOURCE: ISO 26000:2010, 2.12, modified — Note 1 to entry has been modified and Note 2 to entry has been deleted.]

### 3.2

#### food chain

sequence of the stages in the production, processing, distribution, storage and handling of a food and its ingredients, from primary production to consumption

Note 1 to entry: This includes the production of feed and animal food.

Note 2 to entry: The food chain also includes the production of materials intended to come into contact with food or raw materials.

Note 3 to entry: The food chain also includes service providers.
