

BSI Standards Publication

Exposure assessment methods for wireless power transfer systems

National foreword

This Published Document is the UK implementation of IEC TR 62905:2018.

The UK participation in its preparation was entrusted to Technical Committee GEL/106, Human exposure to low frequency and high frequency electromagnetic radiation.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

CONTENTS

FOREWORD.....	7
INTRODUCTION.....	9
1 Scope.....	10
2 Normative references	10
3 Terms and definitions	10
4 Symbols and abbreviations.....	12
4.1 Physical quantities	12
4.2 Constants	12
4.3 Abbreviations.....	12
5 Overview of WPT systems	13
5.1 General.....	13
5.2 WPT systems whose frequency range is less than 100 kHz	13
5.3 WPT systems whose frequency range is from 100 kHz to 10 MHz.....	17
6 Basic assessment methods	20
6.1 General.....	20
6.2 Basic assessment methods considering direct effect.....	20
6.2.1 General	20
6.2.2 Evaluation based on transmit power or current	21
6.2.3 Evaluation of incident fields against reference levels	21
6.2.4 Evaluation of incident fields against basic restrictions.....	21
6.2.5 Evaluation of induced E-field and SAR against basic restrictions	22
6.2.6 Assessment procedure	23
6.3 Basic assessment method considering indirect effect.....	23
Annex A (informative) WPT systems whose frequency range is over 10 MHz.....	25
Annex B (informative) International exposure guidelines	27
B.1 ICNIRP guidelines.....	27
B.2 IEEE standards	30
Annex C (informative) Assessment methods	33
C.1 Exclusion based on transmit power or current.....	33
C.2 Measurement of incident electromagnetic fields	34
C.2.1 Equipment for electric field measurement	34
C.2.2 Equipment for magnetic field measurement	34
C.2.3 Measurement method	35
C.3 Coupling factor	36
C.4 Generic gradient source model	37
C.5 Induced E-field or SAR	40
C.5.1 Measurement.....	40
C.5.2 Calculation	41
C.6 Contact current	43
C.6.1 Equipment	43
C.6.2 Measurements.....	45
Annex D (informative) Case studies	46
D.1 WPT system for EV.....	46
D.1.1 General	46
D.1.2 Assessment procedures for WPT system for EV	47
D.2 Experimental assessment results for EV	58

D.2.1	General	58
D.2.2	Electromagnetic field measurement results	58
D.2.3	Contact current measurement.....	60
D.3	WPT system for mobile devices	61
D.3.1	General	61
D.3.2	Assessment procedures for WPT system for mobile.....	62
Annex E (informative) Numerical and experimental studies		64
E.1	Exposure evaluation of WPT for EV	64
E.1.1	Research in Japan.....	64
E.1.2	Research in Korea	68
E.2	Exposure evaluation of WPT for mobile device.....	72
E.2.1	WPT system in 140 kHz band	72
E.2.2	WPT systems in MHz band	74
E.3	Coupling factor	79
E.3.1	WPT system for EV	79
E.3.2	WPT system for mobile device.....	82
E.3.3	Evaluation example of CF and GGSM using a cylinder model	83
E.4	SAR measurement.....	87
E.5	Contact current	89
E.5.1	WPT system for EV	89
E.5.2	WPT systems for mobile (MHz).....	90
Annex F (informative) Medical implants.....		92
F.1	Background.....	92
F.2	Medical implant enhancement factor	92
F.3	Numerical evaluation of medical implant enhancement factor.....	97
F.3.1	General	97
F.3.2	Numerical setup.....	97

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**EXPOSURE ASSESSMENT METHODS FOR
WIRELESS POWER TRANSFER SYSTEMS****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a Technical Report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 62905, which is a Technical Report, has been prepared by IEC technical committee 106: Methods for the assessment of electric, magnetic and electromagnetic fields associated with human exposure.

The text of this Technical Report is based on the following documents:

Enquiry draft	Report on voting
106/416/DTR	106/424A/RVDTR

Full information on the voting for the approval of this Technical Report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

IEC TC 106 has the scope to prepare International Standards on measurement and calculation methods used to assess human exposure to electric, magnetic and electromagnetic fields. Wireless power transfer (WPT) systems have been developed and gradually become popular over the world. WPT basically utilize similar wireless technologies to provide power to mobile phones, tablet PCs, electric vehicles (EVs) and so on without cables; but the used frequency range, i.e., tens of kHz to tens of MHz, has not been often used and paid attention to. Both stimulation-based effects (< 10 MHz, for example) and heat-based effects (> 100 kHz, for example) should be considered in this frequency range. ITU-R published a report (ITU-R SM. 2303-1) related to WPT in June 2015 which also mentions RF exposure assessment methodologies. However, no concrete assessment method has been introduced. Only IEC TC 69 has addressed exposure assessment method of WPT for EV in IEC 61980-1:2015. There is no product standard related to WPT other than that standard. Considering that WPT products might be spread in the near future, IEC TC 106 needs to be aware of this issue and established a working group to address methods for assessment of WPT related to human exposures to electric, magnetic and electromagnetic fields.

Based on these backgrounds IEC TC 106 prepared this document consisting of an overview of WPT, basic exposure assessment methods for direct and indirect effects by WPT, case studies, and relevant research. Frequency up to 10 MHz is mainly focused on because both stimulation and heat effects need to be considered but have not been addressed so far. This document also mentions enhancement of internal fields by medical implant devices.

It is hoped that this document will be useful and helpful to develop International Standards for WPT exposure assessment.

EXPOSURE ASSESSMENT METHODS FOR WIRELESS POWER TRANSFER SYSTEMS

1 Scope

This document describes general exposure assessment methods for wireless power transfer (WPT) at frequency up to 10 MHz considering thermal and stimulus effects. Exposure assessment procedures and experimental results are shown as examples such as electric vehicles (EVs) and mobile devices.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

basic restriction

BR

restriction on exposure to time-varying electric, magnetic and electromagnetic fields that is based on established biological effects

3.2

contact current

current flowing into the body resulting from contact with a conductive object in an electromagnetic field

Note 1 to entry: This is the localized current flow into the body (usually the hand, for a light brushing contact).

3.3

current density

current per unit cross-sectional area flowing inside the human body as a result of exposure to electromagnetic fields

3.4

device under test

DUT

device that is tested according to the procedures specified in this document

3.5

dielectric constant

real part of the complex relative permittivity of the lossy material
