BSI Standards Publication

Natural gas — Supporting information on the calculation of physical properties according to ISO 6976

bsi.

National foreword

This Published Document is the UK implementation of ISO/TR 29922:2017.

The UK participation in its preparation was entrusted to Technical Committee PTI/15, Natural Gas & Gas Analysis.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword ..... **vi**

Introduction ..... **vii**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Symbols, units and abbreviated terms **1**
4.1 Quantities 1
4.2 Subscripts 3
4.3 Superscripts 3
4.4 Abbreviated terms 3

5 Enthalpy of combustion of the ideal gas and its variation with temperature **4**
5.1 Preamble 4
5.2 Standard enthalpy of combustion at 25 °C 4
5.3 Standard enthalpy of combustion at other temperatures 5
5.4 Formulation of the ideal-gas enthalpy 6
5.5 Illustrative examples 7
5.6 Uncertainty in enthalpy of combustion 8

6 Non-ideality: Variation of real-gas enthalpy of combustion with pressure **9**
6.1 Preamble 9
6.2 Formulation of the enthalpic correction 10
6.3 Estimation of the enthalpic correction 12
6.4 Conclusion 13

7 Non-ideality: Compression factor effect on volume-basis calorific values **13**
7.1 Compression factor 13
7.2 Virial equation of state 14
7.3 Estimation of mixture compression factor 15
7.4 Limitations of the modified IGT-32 method 17
7.5 Uncertainty in compression factor 18

8 Quantitation of volumetric non-ideality **18**
8.1 Second virial coefficients of pure components 18
8.1.1 Preliminary procedures 18
8.1.2 Improved procedure 19
8.2 Summation factors of pure components 21
8.2.1 Overview 21
8.2.2 Major components of natural gas 21
8.2.3 Hydrogen and helium 22
8.3 Compression factors of the permanent gases 23
8.4 Pure component uncertainties 25
8.4.1 Uncertainty of second virial coefficients 25
8.4.2 Truncation error 25
8.4.3 Linearization error 27
8.4.4 Berlin versus Leiden 28
8.4.5 Hydrogen and helium 29
8.4.6 Water 30
8.4.7 Combination of uncertainties 31
8.5 Mixture uncertainty 31

9 Miscellaneous data **31**
9.1 Atomic weights of the elements 31
9.1.1 Atomic weights 2007 31
9.1.2 Atomic weights 2009 and 2011 32
9.1.3 Discussion 34

9.2 Composition and molecular weight of dry air 35

10 Effects of water vapour on calorific value 36
10.1 Preamble 36
10.2 Excluded volume effect 37
10.3 Latent heat (enthalpic) effect 38
10.4 Compression factor effect 39
10.5 Combination of effects 39
10.6 Spectator water 40
10.7 Effect of humid air 41
10.7.1 Preamble 41
10.7.2 Stoichiometric combustion with oxygen 42
10.7.3 Combustion of dry gas with excess dry air 42
10.7.4 Combustion of wet gas with excess dry air 43
10.7.5 Combustion of wet gas with excess humid air 43

11 Summary, discussion and selection of the calorific value of methane 45
11.1 Standard enthalpy of combustion 45
11.1.1 Background 45
11.1.2 Selection of data 45
11.1.3 Recalculation of Rossini values 46
11.1.4 Evaluation of selected data 48
11.1.5 Selected value and uncertainty 52
11.2 Derived calorific values 52
11.3 Comparisons between calorimetric methodologies 54

12 Calorific values on a mass basis 56
12.1 Calorific values on a mass basis for components of natural gas 56
12.2 Alternative (non-normative) method of calculation for mass-basis calorific values 57

13 Calorific values on a volume basis 60
13.1 Calorific values on a volume basis for components of natural gas 60
13.2 Alternative (non-normative) method of calculation for volume-basis calorific values 60

14 Approximate conversion between reference conditions 63
14.1 Factors for conversion between metric reference conditions 63
14.2 Equations for conversion between metric reference conditions 65
14.3 Expression of non-SI reference (base) pressures in metric units 65

15 Mathematical and methodological issues relating to estimation of uncertainty 66
15.1 Principles 66
15.2 Input data 68
15.2.1 Preamble 68
15.2.2 Reference conditions 68
15.2.3 Composition data 68
15.2.4 Physical property data 69
15.3 Uncertainty of the calculational method 70
15.4 Evaluation of sensitivity coefficients 70
15.4.1 Preamble 70
15.4.2 Analytical method 71
15.4.3 Finite difference method 73
15.4.4 Monte Carlo method 73

16 Detailed derivation of uncertainty equations in ISO 6976:2016 73

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 193, *Natural gas*, Subcommittee SC 1, *Analysis of natural gas*.

Introduction

Both international and intranational custody transfer of natural gas usually require precise determination of both the quantity and the quality of the gas to be traded. ISO 6976:2016, which cancels and replaces ISO 6976:1995, specifies methods for the calculation of those properties, often known as the combustion properties, which (in part) describe gas quality, namely gross (superior) and net (inferior) calorific value, density, relative density, gross and net Wobbe index. The methods provide the means of calculating the properties, including uncertainties, of any natural gas, natural gas substitute, or similar combustible gaseous fuel of known composition at commonly used reference conditions.

Some 80-odd years ago, in the Introduction to Hyde and Mills' classic text *Gas Calorimetry*, Sir Charles Vernon ('CV') Boys wrote the words[109] " … *I hesitate to give the number of actual tests of the calorific value of gas which are made every year, but ... it will be evident that any machinery set up to ascertain its value must be extensive ... The fact is that no single commodity generally purchased by the public is so carefully watched and maintained of its guaranteed quality as gas ... "*. Since that time, the technology of gas calorimetry has changed beyond either recognition or imagination, but the truth of the sentiment expressed remains unchanged and refers every bit as much to 2017 as it did to 1932.

This document acts as a repository for those manifold technical details which justify and explain the methods presented in the new third (2016) edition of ISO 6976 but which are not directly needed in its everyday routine implementation. In short, it is conceived and intended as a complete(ish) knowledge base which provides full and proper technical authentication of ISO 6976.

Natural gas — Supporting information on the calculation of physical properties according to ISO 6976

1 Scope

This document acts as a repository for those manifold technical details which justify and explain the methods presented in the third edition of ISO 6976 but which are not directly needed in the everyday routine implementation of the standard.

Each main clause addresses a specific aspect of the calculational method described in ISO 6976:2016, and is intended to be self-sufficient and essentially independent of each other clause. For this reason, the user should not expect the whole to be accessible to study as a sequentially coherent narrative.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 6976 apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

— IEC Electropedia: available at http://www.electropedia.org/

— ISO Online browsing platform: available at http://www.iso.org/obp

4 Symbols, units and abbreviated terms

4.1 Quantities

Symbol	Meaning	Unit
a	atomic index for carbon in the generalized molecular species $C_aH_bN_cO_dS_e$	—
b	atomic index for hydrogen in the generalized molecular species $C_aH_bN_cO_dS_e$	—
c	atomic index for nitrogen in the generalized molecular species $C_aH_bN_cO_dS_e$	—
d	atomic index for oxygen in the generalized molecular species $C_aH_bN_cO_dS_e$	—
e	atomic index for sulfur in the generalized molecular species $C_aH_bN_cO_dS_e$	—
g	coefficients in equation for B	—
h	molar enthalpy	$kJ \cdot mol^{-1}$
k	coverage factor	—
m	number of sets of values	—
n	number of determinations in a set of values	—
p	pressure (absolute)	kPa
q	exact input quantity in calculation of Y	(varies)
r	correlation coefficient	—
s	summation factor	—
t	Celsius temperature	°C
$u(Y)$	standard uncertainty of Y	(varies)
